Quality Report

Caressant Care Woodstock Long-term Care

June 2022

Caressant Care Nursing and Retirement Homes Ltd.

Background:

At Caressant Care continuous quality improvement (CQI) is a transparent process and an effective way to improve care for residents and to improve practice for staff. Quality improvement (QI) is not a linear process, and we believe there are always opportunities to be innovative, optimize, streamline, and revise or develop new processes for clinical and operational effectiveness and efficiency. CQI is an ongoing continuous process and considered an integral part of everyone's work, regardless of role or position within the organization.

Caressant Care is committed to resident-directed, safe, quality care that responds to a resident's physical, psychological, emotional, social, spiritual, and cultural goals and needs and is respectful of every resident's individual identity and history and fostering an inclusive environment that supports continuous quality improvement and innovation.

Introduction:

Input for improvement is obtained in a variety of ways.

Caressant Care participates in an accreditation process through CARF International. Caressant Care seeks input from residents, families, persons of importance to residents, and staff through an ongoing survey process.

Feedback is sought through resident driven committees such as Food Committee and Residents' Council as well as Family Council (if available), where suggestions and concerns can be brought forward.

Information about obtaining feedback, concerns and complaints is shared with residents and their designates at move in, and staff are provided information on improvement processes and initiatives when onboarding and on an annual basis.

Active engagement is sought through departmental meetings as well as, interprofessional meetings such as Professional Advisory Council and Continuous Quality Improvement meetings are held regularly where Quality Improvement plans are reviewed and discussed.

Priorities and targets are determined through internal and external benchmarks, audits, legislation, program evaluations and other reviews such as the Ministry of Long-Term Care, Ministry of Labour, Public Health, or other internal or external stakeholder inspections.

A variety of QI processes and tools may be utilized in the QI process. In addition, an individual Quality Improvement Plan will be submitted to Health Quality Ontario (HQO) on an annual basis.

The attached plan provides our quality commitment priorities that Caressant Care has made to residents, staff, and community partners to improve specific quality issues through focused targets and actions.

Definitions:

Health Quality Ontario is a provincial agency and the province's advisor on health care quality. The role of Health Quality Ontario is to monitor **and report on how the health system is performing**, provide guidance on important quality issues and assess evidence to determine what constitutes optimal care.

Resident-Centred Care is a model of senior care that invites, accommodates, and respects residents' personal wishes and desires in health care.

CIHI Canadian Institute for Health Information (CIHI) provides comparable and actionable data and information that are used to accelerate improvements in health care, health system performance and population health across Canada.

Continuous Quality Improvement (CQI) Committee

Our designated QI lead is Crystal Forbes, Executive Director

Members of the CQI Committee include but are not limited to the Executive Director, Director of Care, Medical Director, each designated lead of the home, registered dietitian, pharmacy consultant, personal support worker and nursing staff representation, as well as representation from Resident and Family Councils, if available.

Main Responsibilities of the CQI Team

1. To monitor and report to the long-term care home on quality issues, residents' quality of life, and the overall quality of care and services provided in the long-term care home, with reference to appropriate data.

- 2. To consider, identify and make recommendations to the long-term care home licensee regarding priority areas for quality improvement in the home.
- 3. To coordinate and support the implementation of the continuous quality improvement initiative, including but not limited to, preparation of the report on the continuous quality improvement initiative.

Meetings are held at a minimum quarterly.

Brief Summary of Quality Improvement Achievements fiscal year 2021:

Accreditation:

In the second quarter of 2021, we were proud to be accredited By CARF Canada through the Bridge Process with a 3-year award until 2024. Accreditation is a voluntary process that Long-term Care (LTC) homes can use to assess their services and help them improve the quality, safety, and efficiency of their performance for the benefit of their residents and the health system.

Building and Environmental Improvements:

Within the last fiscal year, we have installed HEPA filters and air conditioning in all hallways and common areas on the A-side side of our home. We have HEPA filters in both hallways and common areas of our home on the B-side of our home. Air conditioning is also provided in common areas of our home on the B-Side.

Clinical Programs:

The following clinical programs were revised and rolled out last year: pain, falls, bed entrapment, restraints.

Communication and Technology:

Caressant Care as a corporation has updated and restructured our online learning management system as well as added new improved assessments into the care plan library.

We learned early in the pandemic that we would need to alter our communication strategy due to visiting restrictions internally and externally. We have added more mobile devices, so we are able to connect residents and people of importance to them virtually. We have enhanced our use of virtual technology and software to participate in Communities of Practice both internally within Caressant Care and externally with our community partners. To support safer medication practices, our home has implemented Secured Conversations and Practitioner Engagement on our electronic documentation system Point Click Care (PCC).

Infection Control:

Caressant Care recognizes the correlation of infection control practices and keeping our residents safe. With an even greater emphasis with the COVID-19 pandemic, we have further enhanced our Infection Control processes by increased auditing in areas such as hand hygiene, screening, swabbing, PPE, and dietary and housekeeping processes. As a result of these audits, we have enhanced our cleaning processes, and have further engaged and continue to engage with our local Infection Prevention and Control (IPAC) Hub. Additionally, Caressant Care has appointed a corporate IPAC Lead to support the home's internal IPAC lead, as well as provide training/education, policy development, and outbreak management. To further optimize IPAC practices, Caressant Care engaged with a third party IPAC Consulting team to provide comprehensive auditing and education in the home.

Below is our workplan for priority areas of improvement for the upcoming year. These initiatives are highlighted, however are just a snapshot of our overall quality improvement process.

Theme I: Timely and Efficient – a high quality health care system manages transitions well, providing people with the care they need, when and
where they need it
